SKILLS

Frontend | Next.js • React • TypeScript • JavaScript ES6+ • Three.js • Zustand • Tailwind CSS • HTML • CSS
Backend & DB | Node.js • Express.js • RESTful API • AWS • PostgreSQL • MongoDB • Supabase • Prisma
AI & ML | RAG Architectures • LLM Fine-Tuning • Deep Learning • PyTorch • TensorFlow • Pandas • OpenCV
Programming Languages | Java & Python (Advanced DSA, Async IO, Automation)
Tools & Platforms | Linux • Git & GitHub • Docker • Vercel • Playwright • ComfyUI • Jenkins • Figma

EXPERIENCE

Python Automation Engineer *Modelsuite.ai, Germany (Remote)* Jul 2026 - Oct 2026

- Developed and maintained **Python-based production automation** systems with remote teams, diagnosing failures and debugging **live workflows** to resolve production issues fast.
- Proposed, architected and delivered a remote **Android device management** capability using **ADB and scrcpy**, with live screen viewing, remote touch input and keyboard control.
- Refactored the automation **codebase** for stability and performance while documenting technical changes and communicating system status with remote **stakeholders**.

PROJECTS

Agentic AI Video Pipeline ↗ *Automated multi-agent short-form video production* Mar 2026 - Jun 2026

- Orchestrated **5 coordinated agents** (Story → Script → Prompt → QA → Delivery) on **LangGraph**, converting raw articles into fully mastered **~60s** reels autonomously.
- Fueled generation through headless **ComfyUI Wan 2.2** diffusion and **FFmpeg** mastering on cloud GPUs, with provider fallback routing across **Groq, Gemini, OpenRouter**.
- Maintained progress-perfect reliability with **Supabase** checkpoints, human-in-the-loop approval gates and automatic retry recovery for failed long-running video jobs.
- Delivered end products with automated **Google Drive** delivery hooks, real-time progress streaming and **MCP** tool integration for external agent clients.

Agentic Merchant OS ↗ *Cryptographically bounded financial runtime for AI-native commerce* Jan 2026 - Sep 2026

- Segregated non-deterministic AI negotiation from payments with a pure-Python **Guardian kernel** evaluating **22 invariants** in **<50ms** before any money moves.
- Unified 4 ingress channels — **Next.js 14** chat, **Telegram** bot, **MCP** bridge, and NPCI **UAP-1.0** REST — into one policy core serving conversational and headless agents.
- Settled headless **Razorpay UPI AutoPay** mandates in sub-**350ms** while minting **Ed25519** receipts over a 4-leaf **Merkle** tree with bit-for-bit replay verification.
- Held resilience under load: **71/71** pytests and **11/11** E2E scenarios green, **WAL-mode SQLite** sustaining **1,000+** reads/sec through A2A bursts.

Gov-Transparency RAG ↗ *Forensic document RAG for court records & DOJ data* Feb 2026 - May 2026

- Designed a **4-stage hybrid retrieval** spine — **Pinecone** dense + **BM25** sparse + **Cohere v3.5** cross-encoder — enforcing a **≥0.45** relevance floor with synonym expansion.
- Cut API spend **85%+** via a chunk accumulator flushing **20-30** chunks per call, backed by a **10-key** Gemini embedding pool with automatic **429** cooldown handling.
- Served **Redis** cached hits under **10ms** while background **Supabase** daemon writes kept the user path wait-free and **DuckDB** OLAP scanned **40.8MB** of parsed mail.
- Streamed verified **Llama-3.3-70B** answers with **Source N: justice.gov**↗ citations under a clinical neutrality protocol, keeping every claim auditable end to end.

EDUCATION

B.Tech in Computer Science & Engineering (IoT & Cyber Security) | 2023 - 2027 | Guntur, Andhra Pradesh | **CGPA - 8.4**

ACHIEVEMENTS

- **AWS Future AI** Nanodegree — Udacity (**2026**)↗
- **AWS AI** Practitioner Challenge (**2026**)↗
- **Cash Prize** — Nexora Full-Stack Expo (**2026**)↗
- **Top-100 ranker** built for 100K candidate pool↗
- **AI Agents** Certification — Hugging Face (**2026**)↗
- **Gold Medal** — CodeVerse Hackathon (**2025**)↗
- **700+ DSA** Problems Solved (Java & Python)↗
- **23+ AI & full-stack** projects shipped on GitHub↗
