Summary

Computer Science undergraduate (Class of 2027) with hands-on experience building Python automation systems, AI-powered backends, REST APIs, and multi-agent workflows. Experienced in FastAPI, asynchronous processing, database integration, production debugging, and AI model inference. Interested in building reliable production software and integrating LLMs into practical applications.

Experience

Python Automation Engineer Jul 2026 – Oct 2026
Modelsuite.ai *Remote*

- Develop and maintain Python-based production automation systems; collaborate with remote production teams to diagnose failures, debug live workflows, and resolve production issues.
- Delivered an administrator-facing Android device management capability using ADB and scrcpy, enabling live screen viewing, remote touch input, and keyboard control of connected devices.
- Maintain automation workflows, document technical changes, and communicate system status and operational issues with remote stakeholders.

Projects

Agentic AI Video Content Pipeline / *Python, FastAPI, LangGraph, Supabase, MCP* GitHub

- Built a multi-agent content pipeline using LangGraph to coordinate story generation, scripting, prompt generation, quality assurance, assembly, and delivery, transforming text into short-form videos.
- Integrated generative video inference into a FastAPI backend with asynchronous processing, external model-provider fallbacks, and automated workflow validation. Used Supabase for workflow state and worked on checkpointing and recovery for long-running workflows.
- Experimented with Wan 2.2 14B GGUF-quantized video generation on GPU infrastructure, adjusting inference configurations and generation parameters to balance memory use, latency, and output quality.

Agentic Merchant OS / *Python, FastAPI, Next.js, PostgreSQL, MCP* GitHub

- Built an agentic commerce platform for product discovery, negotiation, and purchasing, separating AI-agent reasoning from a deterministic Commerce Guardian that enforces 22 financial invariants.
- Implemented REST APIs, Google AP2 ES256 mandates, SHA-256 cart binding, MCP JSON-RPC tools, A2A negotiation, and payment workflow integrations. Added cryptographic decision receipts with a Merkle audit trail and replay verification.

Gov-Transparency-RAG / *Python, FastAPI, Pinecone, Redis* Frontend | Backend

- Built a RAG application that extracts and indexes 2,000+ federal court records using PyMuPDF, BeautifulSoup, Gemini embeddings, and Pinecone, enabling semantic retrieval with supporting citations.
- Combined semantic nearest-neighbor search, Cohere reranking, and Redis caching to improve retrieval relevance and support repeated queries.

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, SQL, C
Backend: FastAPI, Node.js, Express.js, REST APIs, asynchronous processing, PostgreSQL, Supabase, Redis
AI Engineering: LLM integration, Generative AI, RAG, LangGraph, LangChain, MCP, prompt engineering, model inference
Software Engineering: OOP, debugging, workflow validation, testing, Git, CI/CD, API integration
Tools & Cloud: Docker, AWS EC2/S3/IAM, GitHub Actions, Jenkins, Pinecone, Playwright

Education

Vasireddy Venkatadri Institute of Technology Guntur, India
B.Tech in Computer Science & Engineering (IoT, Cybersecurity & Blockchain) *Sep 2023 – May 2027*
CGPA: 8.3/10.0

Achievements & Certifications

AWS Future AI Programmer Nanodegree – Udacity (2026) | Gold Medal – CodeVerse (2025)
Cash Prize – Nexora Full-Stack Expo (2026) | AI Agents Certification – Hugging Face (2026)
AWS AI Practitioner Challenge (2026) | 700+ DSA Problems Solved (Java & Python)
